

Irrigation System Winterization

GreenWave Associates offers a two tier program designed specifically to avoid damage to your irrigation system through proper winterization practices. The first stage is winter system shut down. The second phase includes our spring start-up and system analysis.

Our annual system winterization program includes the following:

- Isolation of water source from irrigation lines
- Winterization of backflow prevention assembly device
- Drain pump (if applicable)
- Deactivate irrigation controller

System shutdown and winterization cost is \$105.00

Our spring start-up and system analysis includes the following:

- Pressurize irrigation lines / prime pump (if applicable)
- Check performance of all valves and sprinkler heads
- Run system to check irrigation coverage
- Make all adjustments and nozzle changes as needed
- Reprogram irrigation controller

Start-up and system analysis cost is \$105.00

The price for selecting both parts of the package will be \$185.00, a savings of \$25!
